The advantages and flexibility of the tractor-trailer combination

With its better payload, better manoeuvrability, efficient, powerful equipment, the CITY FRUEHAUF range offers performance greatly superior to the classic 4x2 and 6x2 delivery carriers.

Thanks to the load capacity of their bogies and their optimized profile, the CITY, the URBAN and the DISTRICT offer exceptional, unequalled payloads. Like the 38 T semi-trailers, known on the market for their sturdy reliability, they take full advantage of the "Designed to Last" concept. The mechanically welded flatbed, the solid floor and the reinforced body are perfectly adapted to harsh, intensive use.

The range:

CITY: single-axle vehicle

- 21 pallets – 8.50 m in length
- 24 pallets – 9.85 m in length
- 27 pallets – 11.03 m in length

URBAN: double-axle vehicle

- 27 pallets – 11.03 m in length
- 33 pallets – 13.61 m in length

DISTRICT: triple-axle vehicle

- 33 pallets – 13.61 m

Coupling plate full width with reinforced nose

Steering mechanism access plate

Hot dip galvanized chassis

Rear axle on swivel frame
